Probiotic Series

Product Innovation for a Healthy Microbiome*

Featuring New Products including the PureBi•Ome™ Line

*These statements have not been evaluated by the Food and Drug Administration. These products are not intended to diagnose, treat, cure or prevent any disease.
Probiotic Excellence

Every aspect of Pure Encapsulations’ probiotic innovation, from formulation to manufacturing, is designed to maximize clinical effectiveness. Our long-standing commitment to probiotic excellence is defined by seven key tenets:

- **Viability Assurance**: From cold receipt of raw materials to packaging of finished goods, our proprietary Viability Triad (Figure 1) carefully controls for moisture, temperature, and timing on site during manufacturing.
- **Strategic Sourcing**: Strains are sourced based on stability data, including acid, bile and pancreatin tolerance as well as adherence to intestinal cells.
- **Specialized Strains**: These include strains for cardiovascular, emotional well-being, immune and intensive G.I. support.*
- **Advanced Technologies**: A variety of in-house and outsourced technologies including microencapsulation, a proprietary freeze-drying technique, and acid resistant capsules offer enhanced delivery options.
- **Authenticated Strains**: Strain authenticity is validated via DNA sequencing and Fatty Acid Methyl Ester (FAME) analysis.
- **Independent Laboratory Testing**: Products are tested for potency and contamination.
- **Cold Packaging**: All probiotics are shipped in unique foam brick cooler packs to ensure viability upon delivery.

The Pure Encapsulations Probiotic product line includes:

- Single and multi-strain formulations
- High potency products
- Shelf-stable options
- Condition-specific selections
- Advanced freeze-dried, delayed release delivery forms

Figure 1: The Viability Triad
Viability Triad

Probiotics are dynamic organisms with unique requirements and sensitivities. They demand a tightly regulated manufacturing process exceeding GMP compliance to guarantee survival and stability. Every phase of handling and manufacturing at Pure Encapsulations addresses a triad of viability determinants – temperature control, moisture control and timing.

1 Temperature Control
Freezing and thawing probiotics is a common cause of condensation. Pure Encapsulations circumvents this issue with a precise tempering protocol, gradually bringing probiotic raw materials from storage to manufacturing temperature. We purchase small packages of materials, delivered in refrigerated trucks. Smaller packages allow more precise tempering and reduce condensation risk. Finished products are stored in 4°C walk-in coolers until shipped. Each shipment is packaged in an insulated cooler with foam ice bricks.

2 Timing
Upon receipt of raw material, stock is rapidly entered into our system and sampled under tight controls. Weighing and blending are also executed within strict time limits to minimize exposure to ambient moisture.

3 Moisture Control
Relative humidity is monitored and recorded in all rooms every two hours, including the warehouse, walk-in coolers and production rooms. Our blending rooms use compressed dry air at a low, tightly-controlled dew point. During the encapsulation process, moisture must also be minimized. As a result, our probiotics are formulated to include a proprietary rice base to minimize water activity (A_w), which refers to the ability of water to interact with microorganisms (Figure 2).

Figure 2: Minimizing water activity (A_w) with a proprietary rice-based moisture control enhances finished product potency.

*These statements have not been evaluated by the Food and Drug Administration. These products are not intended to diagnose, treat, cure or prevent any disease.
Sourcing, Identity and Potency Assurance

Strategic sourcing
Suppliers must provide proof of genetic identity testing as well as stability data. They must also provide evidence of gastric, bile, and pancreatic enzyme tolerance. The capacity of probiotics to withstand these conditions is among the principal criteria in the sourcing of Pure Encapsulations’ probiotics (Table 1).

Specialized strains
We offer exclusive and first-to-market condition-specific strains, including strains for cardiovascular support, emotional well-being and immune health.*

Proprietary technology
Through strategic partnerships, Pure Encapsulations is able to offer proprietary technologies, including a patented microencapsulation process for shelf stability and improved strain resistance, and a freeze-drying technique allowing for the combination of bioactives with probiotics without compromising viability due to moisture content. This “freeze-dried” technology is reflected in our new PureBi•Ome™ line.

Strain authentication
Probiotics are genetically and functionally diverse, and minor variations can impact biological activity. The expanding taxonomic range of clinically relevant species demands precise identification. Pure Encapsulations utilizes DNA sequencing to verify genus and species by matching our results with a referenced genetic fingerprint. Fatty Acid Methyl Ester, or FAME, analysis is also performed to authenticate specific strains comparing their fatty acid composition against a reference standard.

Independent laboratory testing
In addition to strain authentication, qualified, independent labs verify potency of raw materials and finished products using the most current quantitative methods for enumerating total colony forming units, or CFU. In addition, raw materials and finished products are third-party tested for yeast, mold and pathogens to ensure purity.

Cold packaging
We include ice packs in all shipments carrying probiotics, including our shelf-stable probiotic products. Our unique foam brick cooler packs sustain a cool package environment over a 45-hour period to ensure probiotic viability upon delivery to your door.
**Excellence In Sourcing and Formulation**

Data is derived from a compilation of supplier and published studies of simulated gastric and intestinal conditions at physiological pH.

Excellence In Manufacturing: A Multi-Step Process

Pure Encapsulations’ onsite probiotic manufacturing constitutes a multi-step application of the viability triad, addressing every step of handling and manufacturing by controlling temperature, timing and moisture through tightly regulated procedures.

Figure 3: Map of controlled operations ensuring viability.
PureHeart™ Probiotic

**Shelf-Stable; Acid-Resistant Capsules**

Species:
- Lactobacillus reuteri (NCIMB 30242)

Potency: 2.9 billion CFU/capsule

Clinical applications: Cardiovascular health, lipid metabolism, and blood flow*

Each vegetarian capsule contains up to 2.9 billion CFU of Lactobacillus reuteri NCIMB 30242, along with other ingredients like rice starch, cellulose, and gellan gum.

This formula does not require refrigeration to maintain culture viability.

2 capsules daily, in divided doses, with meals.

ProbioMood

**Convenient, Shelf-Stable, Single-Serving Stick Packs**

Species:
- Lactobacillus helveticus Rosell-52 ME
- Bifidobacterium longum Rosell-175 ME

Potency: 3 billion CFU/capsule

Clinical applications: Emotional well-being and relaxation; Maintains healthy urinary cortisol levels*

Each stick pack (1.5 g) contains up to 3 billion CFU of the probiotic blend, with other ingredients like xylitol and maltodextrin.

Contains milk, soy

This formula does not require refrigeration to maintain culture viability.

Take 1 stick pack daily, with or between meals, with or without water.

The Product Line – NEW

PureBi•Ome™ Product Line

Utilizes the proprietary PureBi•Ome™ freeze-drying technology, to reduce moisture and preserve probiotic potency when combined with other active ingredients

Features:

- Formulations containing a 4-strain blend clinically studied for over 15 years
  - Lactobacillus acidophilus (NCIMB 30157)
  - Lactobacillus acidophilus (NCIMB 30156)
  - Bifidobacterium bifidum (NCIMB 30153)
  - Bifidobacterium lactis (NCIMB 30172)
- Probiotics combined with other active ingredients for the first time, including glutamine, cranberry and n-acetyl-l-cysteine for condition-specific support*

Clinical Research:

- In two double-blind, placebo-controlled trials involving 30 and 162 subjects, respectively, supplementation with 25 billion CFU of the PureBi•Ome™ probiotic blend promoted a healthy microflora population in the G.I. tract during or following antibiotic use.*
- In another double-blind, placebo-controlled trial involving 138 elderly individuals, supplementation with 25 billion CFU of the PureBi•Ome™ probiotic blend provided support for healthy intestinal microflora populations and lessened the occurrence of occasional diarrhea.*
- In a 10-week, randomized, placebo-controlled study involving 52 subjects (Figure 4), 25 billion CFU of the PureBi•Ome™ probiotic blend supported quality of life, bloating, satisfaction with bowel habit, and G.I. comfort. Support diminished when supplementation was discontinued.*

Figure 4: Mean change in scores for (a) bloating (b) gastrointestinal comfort during the 10-week study*

*Significant change (p < 0.05)
**PureBio•Ome™ Intensive**

**Species:**
- Lactobacillus acidophilus (NCIMB 30157)
- Lactobacillus acidophilus (NCIMB 30156)
- Bifidobacterium bifidum (NCIMB 30153)
- Bifidobacterium lactis (NCIMB 30172)
- Saccharomyces boulardii

**Potency:** 30 billion CFU/capsule

**Clinical applications:** Advanced support for microflora balance, bowel motility, and G.I. comfort*

Each vegetarian capsule contains
